The Holy Grail in Kentucky Bluegrass breeding has always been to get a top-performing variety that yielded enough seed to make it economical for the turfgrass user. We have never been closer to this goal than with the introduction of Brooklawn Kentucky Bluegrass.

Brooklawn, under different maintenance regimes in the National Turfgrass Trials, tied many Category One Bluegrasses in overall turf performance including color, texture, and disease resistance.

Brooklawn establishes quickly and has aggressive Rhizome development which makes it an excellent choice in blends for sod farms. It doesn't get powdery mildew or crown rust which makes it an excellent

choice to blend with the "Midnight" types. Brooklawn has excellent winter density and was ranked 6th among all entries in sod stretching strength tests.

Be sure to specify Brooklawn in all of your mixtures and blends where **top performance with affordable pricing** is your primary goal!
